4.4~4.10

Done

First, I learned to write a Java spider code to get the message from network. Well, what I can get from the network is just the contents that don't need sign in. Next is about the overview. I have downloaded papers about the Knowledge Graph. Finally is about the ArnetMiner which is a system made by Tang Jie. I have read the paper which Tang Jie wrote about it.

To do list

First, I will finish my task about spider in Java. Then I'm going to make an outline about my overview. At last, I'll get help from Guo Fangzhou to complete the survey of ArnetMiner.
